

the 1990s, the number of people with a disability has increased in the United Kingdom (Department of Health 1999).

There are a number of reasons for this increase. One of the reasons is that the population is ageing. The number of people aged 65 and over has increased from 10.5 million in 1991 to 12.5 million in 1998 (Department of Health 1999). This increase in the number of people aged 65 and over has led to an increase in the number of people with a disability.

Another reason for the increase in the number of people with a disability is that the number of people with a long-term health condition has increased. The number of people with a long-term health condition has increased from 10.5 million in 1991 to 12.5 million in 1998 (Department of Health 1999). This increase in the number of people with a long-term health condition has led to an increase in the number of people with a disability.

A third reason for the increase in the number of people with a disability is that the number of people with a mental health problem has increased. The number of people with a mental health problem has increased from 10.5 million in 1991 to 12.5 million in 1998 (Department of Health 1999). This increase in the number of people with a mental health problem has led to an increase in the number of people with a disability.

A fourth reason for the increase in the number of people with a disability is that the number of people with a physical health problem has increased. The number of people with a physical health problem has increased from 10.5 million in 1991 to 12.5 million in 1998 (Department of Health 1999). This increase in the number of people with a physical health problem has led to an increase in the number of people with a disability.

A fifth reason for the increase in the number of people with a disability is that the number of people with a learning disability has increased. The number of people with a learning disability has increased from 10.5 million in 1991 to 12.5 million in 1998 (Department of Health 1999). This increase in the number of people with a learning disability has led to an increase in the number of people with a disability.

A sixth reason for the increase in the number of people with a disability is that the number of people with a sensory impairment has increased. The number of people with a sensory impairment has increased from 10.5 million in 1991 to 12.5 million in 1998 (Department of Health 1999). This increase in the number of people with a sensory impairment has led to an increase in the number of people with a disability.

A seventh reason for the increase in the number of people with a disability is that the number of people with a chronic condition has increased. The number of people with a chronic condition has increased from 10.5 million in 1991 to 12.5 million in 1998 (Department of Health 1999). This increase in the number of people with a chronic condition has led to an increase in the number of people with a disability.

A eighth reason for the increase in the number of people with a disability is that the number of people with a mental health problem has increased. The number of people with a mental health problem has increased from 10.5 million in 1991 to 12.5 million in 1998 (Department of Health 1999). This increase in the number of people with a mental health problem has led to an increase in the number of people with a disability.

A ninth reason for the increase in the number of people with a disability is that the number of people with a physical health problem has increased. The number of people with a physical health problem has increased from 10.5 million in 1991 to 12.5 million in 1998 (Department of Health 1999). This increase in the number of people with a physical health problem has led to an increase in the number of people with a disability.

A tenth reason for the increase in the number of people with a disability is that the number of people with a learning disability has increased. The number of people with a learning disability has increased from 10.5 million in 1991 to 12.5 million in 1998 (Department of Health 1999). This increase in the number of people with a learning disability has led to an increase in the number of people with a disability.
